

Ethnomathematics in Action: Insights from the Malekula Community

Selvi Kara
Assistant Professor of Mathematics
at Bryn Mawr College

Ethnomathematics, as defined by Marcia Ascher, is the study and presentation of mathematical ideas of traditional peoples. This talk will highlight how various communities, both small-scale and large, have employed mathematics to guide their daily lives and shape their societal and cultural interactions. In particular, we will focus on the Malekula people and their unique method of determining section memberships within their community, shedding light on the intersection of cultural rules and mathematical concepts.

*Wednesday, November 15, 2023
at 7 p.m. in Park 245 or via Zoom*
